Territorial integration

Context

Resilience

CLIMATE CHANGE

Water crisis

Food security

Population growth

SDGs

Water allocation

Water Governance

Water for food

Water efficiency

Trust

Capacity building

Integration at scales

Water-Energy-Food Nexus

Ecosystem services

Water quality

Community development

FOOD SECURITY

INCREASED RISKS

Policy integration

Global food demand

System harmonisation

SUSTAINABLE DEVELOPMENT GOALS

1 NO POVERTY

2 ZERO HUNGER

3 GOOD HEALTH AND WELL-BEING

4 QUALITY EDUCATION

5 GENDER EQUALITY

6 CLEAN WATER AND SANITATION

7 AFFORDABLE AND CLEAN ENERGY

8 DECENT WORK AND ECONOMIC GROWTH

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

10 REDUCED INEQUALITIES

11 SUSTAINABLE CITIES AND COMMUNITIES

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

13 CLIMATE ACTION

14 LIFE BELOW WATER

15 LIFE ON LAND

16 PEACE, JUSTICE AND STRONG INSTITUTIONS

17 PARTNERSHIPS FOR THE GOALS

SUSTAINABLE DEVELOPMENT GOALS

2020 SDG Report: SDG6

- The coronavirus crisis has brought to the fore the critical importance of water, sanitation and hygiene for protecting human health.
- Despite progress, billions of people around the globe still lack these basic services. Immediate action to improve access to water, sanitation and hygiene services is required to prevent infection and contain the spread of COVID-19.
- Water is essential not only to health, but also to poverty reduction, food security, peace and human rights, ecosystems and education.
- Nevertheless, countries face growing challenges linked to water scarcity, water pollution, degraded water-related ecosystems and cooperation over transboundary water basins.
- In addition, funding gaps and weak government systems hold many countries back from making needed advancements.

“UNLESS CURRENT RATES OF PROGRESS INCREASE SUBSTANTIALLY, GOAL 6 TARGETS WILL NOT BE MET BY 2030.”

SDG 6 - Effective and Transparent Governance

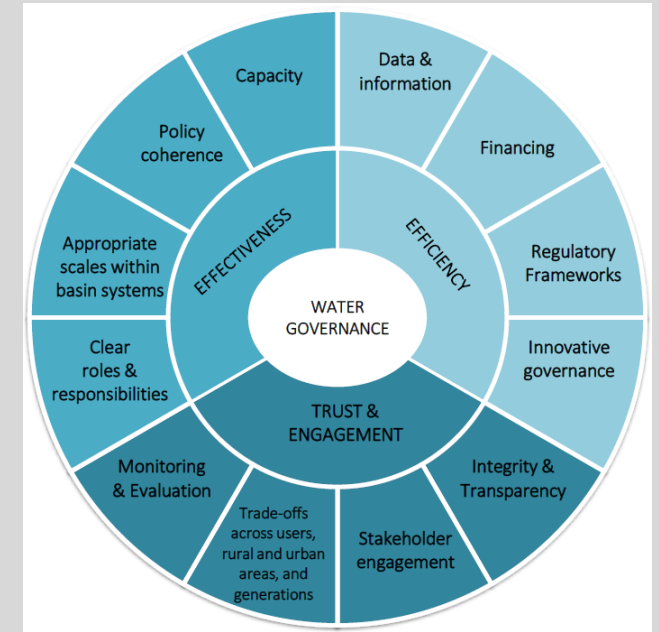

- Understanding the local context
 - Cross sectoral integration
 - Increasing coordination

Water Governance

- **Intersectoral Cooperation**
- **Public awareness and dialogue**
- **Long term vision**
- **Political willingness**
- **Effective policy integration at local, regional, and national level**

Key dimensions of water governance - OECD

- Effectiveness: the contribution of governance to define clear sustainable water policy goals & targets at all levels of government, to implement those policy goals, & to meet expected targets
- Efficiency: the contribution of governance to maximise the benefits of sustainable water management & welfare at the least cost to society
- Trust and Engagement: the contribution of governance to building public confidence & ensuring inclusiveness of stakeholders through democratic legitimacy & fairness for society at large

(OECD, 2015)

Increasing Population

Projected Population Growth (in billions)

Note: "SSA" = Sub-Saharan Africa, including Sudan. "LAC" = Latin America and Caribbean. "N America" = North America. "N Africa" = Rest of Africa.

Changing consumption patterns

Global Consumption of Meat and Milk Products

REGION	LIVESTOCK (KCAL/PERSON/DAY)			BEEF AND MUTTON (KCAL/PERSON/DAY)		
	2006	2050	% CHANGE	2006	2050	% CHANGE
European Union	864	925	7%	80	75	-6%
Canada & USA	907	887	-2%	117	95	-19%
China	561	820	46%	41	89	116%
Brazil	606	803	33%	151	173	15%
Former Soviet Union	601	768	28%	118	156	32%
Other OECD	529	674	27%	64	84	31%
Latin America (ex. Brazil)	475	628	32%	59	86	45%
Middle East and North Africa	303	416	37%	59	86	45%
Asia (ex. China, India)	233	400	72%	24	43	79%
India	184	357	94%	8	19	138%
Sub-Saharan Africa	144	185	29%	41	51	26%
World	413	506	23%	50	65	30%

We have a food gap

69%

Required increase
in food calories
to feed 9.6 billion
people by 2050

Natural systems

Complexity
Diversity
Rainfall - variable
Nutrient continuity
Little deep drainage
Net ↓ movement of salt

Irrigated systems

Simplicity
Uniformity
Rainfall / irrigation - regular
Nutrient discontinuity
Excess deep drainage
Build up of salt

But agriculture is critical to food, the economy and society

28%

Global population
directly or indirectly
employed by agriculture

Three critical needs

THE GREAT BALANCING ACT

The world must achieve a “great balancing act” in order to sustainably feed 9.6 billion people by 2050.

Three needs must be met at the same time.

CLOSING THE FOOD GAP

69%

Required increase
in food calories
to feed 9.6 billion
people by 2050

SUPPORTING ECONOMIC DEVELOPMENT

28%

Global population
directly or indirectly
employed by agriculture

REDUCING ENVIRONMENTAL IMPACT

Key criteria for a sustainable food future

In *Creating a Sustainable Food Future*, the World Resources Institute identified five key sustainability criteria:

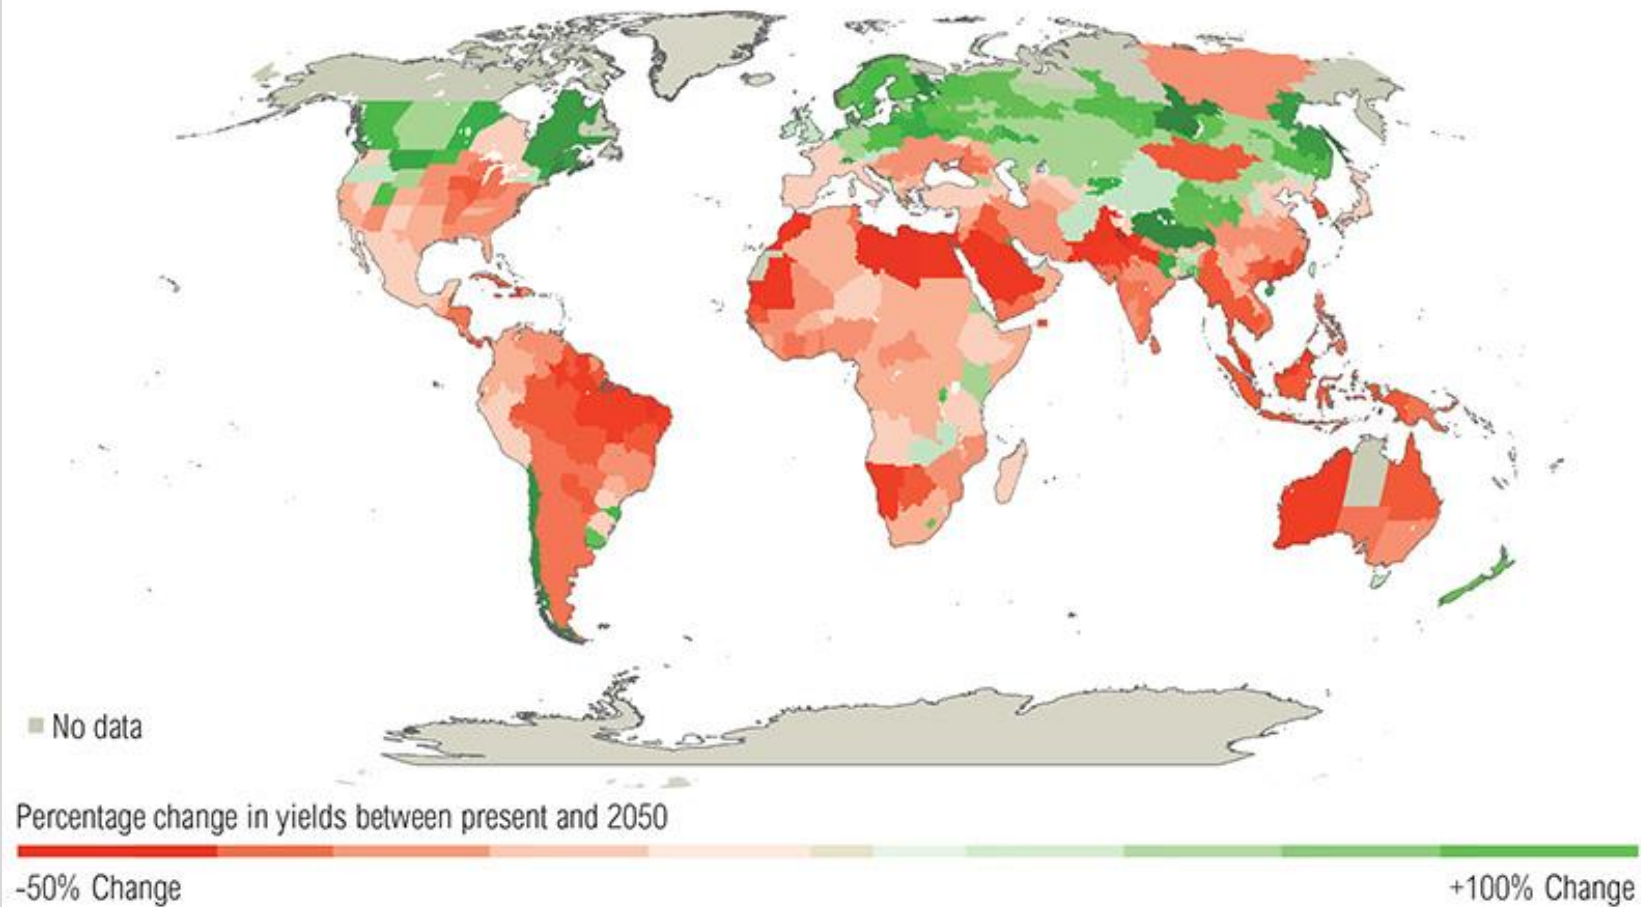

- **advancing rural development**
- **generating benefits for women**
- **protecting ecosystems**
- **reducing greenhouse gas emissions**
- **avoiding overuse and pollution of freshwater**

Multi-level integrated governance is critical

- Water's intrinsic characteristics make it highly sensitive to and dependent on multi-level governance
- Water connects across sectors, places and people, as well as geographic and temporal scales. Hydrological & administrative don't match
- Its management is both a global and local concern, involving numerous public, private and non-profit stakeholders
- The water sector is highly capital-intensive and monopolistic, with important market failures where coordination is essential
- It is inherently complex and strongly linked to domains that are critical for development, including health, environment, agriculture, energy, spatial planning, regional development & poverty alleviation
- Complex, resource-intensive responsibilities are allocated to sub-national governments, resulting in interdependencies across levels of government that require co-ordination to mitigate fragmentation

Climate change exacerbates the problem

Most studies now project adverse impacts on crop yields due to climate change (3°C warmer world)

Climate change: Coping with Risks

- **Awareness**
- **Preparedness**
- **Adaptation capacity**
- **Resilience**

What does good policy integration look like?

- Water development and management considers the various uses of water and range of people's water needs
- Stakeholders are given a voice in water planning and management, with particular attention to securing the involvement of women and the poor
- Policies and priorities consider water resource implications including two-way relationship between macroeconomic policies and water development, management and use
- Water-related decisions made at local and basin levels are consistent with, or at least do not conflict with, the achievement of broader national objectives
- Water planning and strategies are incorporated into broader social, economic, and environmental goals.

Water Governance and Policy Integration

- **Vertical and horizontal policy integration**
- **Reference to the socio-ecological context in the river basin**
- **Consultation and participation of the communities**
- **Involvement of all stakeholders in the decision-making process**
- **Inclusive and equitable policies**
- **Synergetic and intersectoral approaches**
- **Climate adaptation and risk assessment**

**THANK YOU VERY MUCH FOR YOUR
ATTENTION**
